

DATASHEET

400 X,F/H,F-D-05-Z

Key Features:

- ^{19}F on X AND ^1H channel enabling $^{19}\text{F}\{^1\text{H}\}$ and e.g. $^{13}\text{C}\{^{19}\text{F}\}$.
- Fast channel adjustment for all nuclei within seconds.
- Superior ^1H sensitivity and water suppression.
- Full access to all nuclei around 2H on the X channel .

Description: QUAD 400 X,F/H,F-D-05-Z is a two radio frequency channel probe, optimized for X detection. The X channel covers ^{19}F and the nuclei range between ^{31}P and ^{15}N . The second probe circuit can be tuned either for ^1H or ^{19}F . The probe is equipped with actively shielded single-axis gradient. All channels including lock can be tuned and matched without removing the probe. The probe can be operated at temperatures between -50°C and $+100^\circ\text{C}$ using the appropriate accessories (not included). This probe is equipped with FCA (fast channel adjustment) which enables tuning and matching of all channels within seconds without drift.
